

DEBRIS REMOVAL TAPE AND METHOD OF USING SAME

ABSTRACT

5 A tape and tape roll assembly for adhering thereto debris contained on a surface, such as a non-porous surface. The tape includes a high-adhesion, low-tack adhesive coating. The tape roll comprises a plurality of tape layers, with each tape layer removable from an adjacent underlying layer. The adhesive coating adheres to an outer surface of each layer. The adhesive coating adheres debris contained on the
10 surface to be cleaned to an outermost tape layer of the tape roll without substantially adhering the outermost tape layer to the surface or unwinding the outermost tape layer from the tape roll. The adhesive coating includes at least about 56% by weight tackifier.
